# HPE ArcSight Management Center

Focus on threats, logs, and compliance, not on managing HPE ArcSight

HPE ArcSight Management Center (ArcMC) is a centralized security management center that enables you to manage large deployments of HPE ArcSight solutions such as HPE ArcSight Logger, HPE ArcSight SmartConnectors (Connectors), HPE ArcSight FlexConnectors, and HPE ArcSight Connector Appliance (ConApp) through a single interface.

Centralized management

Centrally manages your HPE ArcSight solution deployments through unified interface. HPE ArcMC helps you save time, effort, and resources for both large and small deployments. This lets you focus on your use cases and not on the tool. With its flexible deployment options such as appliance, software, or virtual appliance, HPE ArcMC fits into your hybrid IT.

HPE ArcMC helps minimize ongoing administrative overhead through support for diagnostics, universal definition, selective definition, alteration/rollout of log collection parameters, and configuration settings from a centralized Web-based interface.

Log traffic management

Remote offices often lack high-bandwith WAN links to data centers. Addiotionally, available bandwidth needs to be prioritized for business critical traffic. To address these challenges, HPE ArcMC offer granular bandwidth controls, compression of logs in transit, as well as prioritization and batching of log data by time and severity.

Unmatched scalability

HPE ArcMC helps you to grow your IT security by simply adding more Connectors or Loggers from a single console. Content such as rules and dashboards can be distributed easily, enabling you to easily manage Big Data. When you need to scale to collect or analyze more data than you are currently handling, simply add another Logger through HPE ArcMC.

Highlights
- Centralized management of HPE ArcSight solution
- Automate change management
- Reduce the resource requirement for security information and event management (SIEM)
- Manage large deployments easily
- Reduce the administrative overhead
- Efficient log traffic management
- Helps optimize bandwidth for log collection
- Support IT operational analytics
- Unify the HPE ArcSight deployment

HPE Services
HPE ESP Global Services take a holistic approach to building and operating cyber security and response solutions. These are the capabilities that support the cyber threat management and regulatory compliance needs of any.

Change management

HPE ArcMC reduces the overhead associated with ongoing updates, upgrades, configuration changes, and general maintenance of a distributed log collection deployment for large-scale distributed deployments. Performing bulk configuration changes are simple through a unified interface.

Reduced resources

It helps maximize your security investment by automating tactical management efforts. Also, it focuses on your security strategy such as compliance, log storage, forensics, and threats as opposed to focusing on tools to manage security.

HPE ArcSight platform integration

Log retention requirements, compliance, audit reports, IT ops troubleshooting, service-level agreements (SLAs), and proactive monitoring of security threats all represent a continuum in the value chain of extracting context and intelligence from log data. As such, it is logical to leverage a common collection infrastructure across the full range of log collection and archival needs for an enterprise, and that is exactly what HPE ArcSight Management Center offers. As the central management layer in the HPE ArcSight platform, HPE ArcMC provides a comprehensive, robust, scalable, and easily manageable collection infrastructure that can be used across log management and SIEM solutions of HPE ArcSight.

This is a distinct advantage of the integrated HPE ArcSight platform, and it avoids the deployment of multiple collection infrastructures that would be required if different vendor solutions were used for log management and SIEM. This benefit applies to both appliance and software-based Logger and Connector technology deployments.

About HPE Enterprise Security

HPE Enterprise Security is a leading provider of security and compliance solutions for the modern enterprise that wants to mitigate risk in their environment and defend against advanced threats.

Based on market-leading products from HPE ArcSight, HPE Fortify, and HPE TippingPoint, HPE Enterprise Security uniquely delivers the advanced correlation, application protection, and network defenses to build the next-generation security operation center (SOC).
